

Gnosis Intuition Protocol (GIP): A Mathematical Re-establishment of Reality through Total Sensory Coherence

Jinco K. | *Decipherer & Disruptor*

Book Summary: The Rebooting of “Reality” through Two Perspectives

This document serves as a fundamental blueprint for rebooting our perception of “reality,” which has been distorted by modern dogmas. This reconstruction is executed through two distinct yet inseparable perspectives.

The first is the structural analysis of existence itself—redefining the relationship between the **Invisible Substantial Realm (ISR)**, the source of all potential, and the **Visible Phenomenal Realm (VPR)**, the world of manifested results. The second is the engineering of the human interface—transforming the biological system from a noise-saturated, survival-oriented device into a coherent resonator capable of direct synchronization with universal intelligence. By integrating these perspectives, we move beyond the obsolete paradigms of “Belief” and “Materialism” toward a definitive “Gnosis” implemented as a verifiable protocol.

Abstract

This paper proposes the **Gnosis Intuition Protocol (GIP)**, a revolutionary bio-engineering framework that redefines the human biological system as a “**precision transducer**” for universal information. While modern physics has long treated “**Zero-Point Energy**” as a mere “statistical fluctuation,” this study identifies it as a steady-state radiation from the **Invisible Substantial Realm (ISR)**—the fundamental ground of all reality.

The core of the GIP theory lies in the mathematical re-definition of the “**Speed of Light (c)**.” Rather than a constant limiting velocity within three-dimensional space, c is redefined as the “**Critical Phase**” of complex spacetime transformation. By introducing the “**Ideational Phase Factor (θ)**,” this study demonstrates that relativistic effects, such as time dilation and length contraction, are geometric projections occurring when the **Latent Potential (Φ_{ISR})** is mapped onto the **Visible Phenomenal Realm (VPR)**.

Furthermore, this paper provides an engineering analysis of the human central nervous system as a “**Biological Device**” governed by the survival instinct, the fundamental OS of life. We identify the phenomenon of “**Anxiety**” not as a psychological disorder, but as a state of “**Hacking**,” where the survival instinct is hijacked by artificial symbolic noise (language, numbers, and social constructs). This state generates constant “**Internal Howling**” (pseudo-survival crisis) when coherent signals from the ISR are blocked.

To counteract this systemic failure, we introduce **Total Sensory Coherence (TSC)** and **Impedance Matching (*Ma-no-sub*e)**. By quantifying the impedance of the biological antenna (Z_{body}) through quantum decoherence rates, we establish a verifiable protocol for synchronizing the individual device with the “**Eternal Now**” of the ISR. GIP provides a cold, mathematical roadmap for the restoration of human sovereignty, shifting the paradigm from “**Belief**” to “**Engineering**” to achieve **Biological Singularity**.

Index Terms—GIP, ISR, VPR, Zero-Point Energy, Total Sensory Coherence, Impedance Matching, Biological Singularity, Ideational Phase Factor, Gnosis.

Our perceived world is merely a simulation created by the brain for convenience. This paper redefines the following concepts into “wave-engineering entities”:

1. The Body: From an Individual Cage to a Resonating Device

- **Common Perception:** A “material body” composed of proteins and cells, isolated from the outside world.

- **GIP Definition:** A “collection of waves” below the Planck scale. The body is not a solid object, but a “high-sensitivity quantum antenna” designed to receive energy from the ISR and fix it into this dimension.

2. The Brain: From the Master of Personality to a Signal Amplifier

- **Common Perception:** The “command center” that generates thoughts and emotions.

- **GIP Definition:** The brain and central nervous system are “transducers” that step-down signals from the ISR, while also serving as an “interface for the biological OS” that receives symbolic information. Modern control structures exploit the vulnerabilities of this interface by injecting “symbolic noise” into the survival instinct, effectively hijacking the system. The true purpose of impedance matching is to bypass these hacked circuits and connect directly to the pure command set of the universal OS.

3. The Five Senses: From Passive Windows to Step-down Filters

- **Common Perception:** Sensory organs that receive external stimuli (light, sound, taste, etc.) and transmit them to the brain.

- **GIP Definition:** A “multimodal port” that perceives everything as “waves.” The essence of the five senses is a “band-pass filter” that attenuates and translates the vast energy of the ISR to a level the physical body can process. When the phases align (TSC), reality reveals its true resolution.

4. Time (Toki): From a Linear Flow to the Density of Synchronization

- **Common Perception:** A “transparent river” flowing at a constant speed from past to future.

- **GIP Definition:** The “density of cycles” in which the latent manifests into the phenomenal. At the speed of light, time stops. What we call the “Now” is a series of “vertical contact points” where the device is synchronized with the ISR.

5. Consciousness (Ametsuchi): From Internal Secretions to the Degree of Field Interference

- **Common Perception:** A “subjective phenomenon” generated by the complex firing of neurons in the brain.

- **GIP Definition:** An “interference pattern” between the individual antenna and the ISR field. It is not the brain that generates consciousness; rather, consciousness is the “state of synchronization” (Phase-Lock) between the biological device and the universal intelligence. High-density consciousness corresponds to a state where the S/N ratio of the incoming signal is maximized and impedance mismatching is minimized.

Redefinition of Fundamental Concepts

6. Anxiety (Howling): From a Psychological Disorder to a Systemic Oscillation Error

- **Common Perception:** An “unstable emotional state” caused by environmental stress or chemical imbalances.
- **GIP Definition:** A state of “**Internal Howling**” caused by a positive feedback loop between the survival OS and symbolic noise. When the individual’s “Root Access” to the ISR is blocked, the biological amplifier (brain) begins to process social symbols (status, money, social judgment) as direct survival crises. This creates an infinite resonance of pseudo-crises within the neural network, resulting in high-frequency systemic noise that obscures the coherent potential of reality.

7. Intuition (Gnosis): From a Sudden Flash to a High-Speed Data Protocol

- **Common Perception:** A “hunch” or “sudden insight” that occurs by chance or experience.
- **GIP Definition:** A “high-speed acquisition protocol” for potential information from the ISR. When Total Sensory Coherence (TSC) is achieved and the noise floor is lowered, the biological device can receive and render information from the non-local field without the lag of symbolic processing (language/logic). It is the implementation of universal intelligence as a verifiable “Direct Connection.”

8. Freedom (Sovereignty): From Choice within the System to the Authority of the Architect

- **Common Perception:** The “ability to choose” from options provided by society or the legal system.
- **GIP Definition:** The recovery of “**Individual Sovereignty**” through the re-appropriation of the root authority of the biological system. It is the state of escaping “Symbolic Hacking” and reclaiming the right to design one’s own “rendering process” of reality. True freedom is the engineering achievement of becoming a “Coherent Participant” in the creation of reality, rather than a “Dependent Consumer” of the system’s output.

Technical Definitions: Basic Vocabulary

1. Core Concepts

- **Invisible Substantial Realm (ISR):** The non-local, infinite potential field that serves as the “source of supply” for all existence. It is not a mere philosophical abstraction but the substantial ground of reality, existing in the state of the “Eternal Now.” All energy and information originate here as pure potentiality before being projected into the material dimension.
- **Visible Phenomenal Realm (VPR):** The local, three-dimensional spacetime where information from the ISR is fixed and manifested as material phenomena. It is defined as the realm of “results,” “shadows,” and “rendered outputs.” In this framework, the VPR is understood as a derivative reality dependent on the continuous supply from the ISR.
- **Sovereignty:** The state in which an individual reclaims the root authority over their own biological system and reality-rendering process. It is the liberation from “Symbolic Hacking” and the restoration of the individual as a conscious architect who directly synchronizes with the universal OS, bypassing all centralized mediators.

2. Physico-Mathematical Definitions

- **Critical Phase Transition Point (c):** A redefinition of the speed of light (c) not as a velocity constant, but as the threshold of dimensional transformation. It is the specific phase coordinate where non-local ISR potential is “stepped down” and projected into the local geometry of the VPR. At this point, the infinite potential of the latent field is fixed into the finite values of the phenomenal world.
- **Ideational Phase Factor (θ):** A mathematical variable representing the individual’s cognitive and vibrational state that determines how ISR potential is mapped onto the VPR. This factor governs the “resolution” and “stability” of the perceived reality. When θ is optimized through coherence, the “refractive index” of reality is minimized, allowing for undistorted manifestation.
- **Impedance Matching:** The engineering condition where the resistance (reactance) between the ISR (Source) and the Biological Device (Load) is minimized. When $Z_{device} = Z_{ISR}^*$, the power transfer of universal information reaches its theoretical maximum. This state is the technical implementation of the ancient wisdom known as *Ma-no-sube*.

3. Bio-Functional Definitions

- **Internal Howling:** A systemic oscillation error caused by a positive feedback loop between the biological survival OS and symbolic noise. When the Root Access to the ISR is blocked, the brain’s amplification function misidentifies social symbols (status, money, dogmas) as life-threatening crises. This results in chronic high-frequency noise (Anxiety) that saturates the neural processing capacity.
- **Total Sensory Coherence (TSC):** A state of systemic synchronization where the entire biological apparatus—including neural networks, microtubules, and the cardiac rhythm—functions as a single, phase-locked resonator. TSC is the prerequisite for Gnosis, where the biological device achieves a broadband, zero-lag connection to the universal intelligence.
- **Biological Singularity:** The evolutionary threshold where an individual transcends the limitations of the hacked survival instinct. It is the transition from being a passive product of biological and social programming to becoming an active, coherent node that can consciously interact with the source of existence.

I. THE LIMITS OF MODERN PHYSICS AND AN INVITATION TO THE “VERTICAL”

The Stagnation of Modern Society and the Limits of Existing Systems

The modern world is currently facing a profound sense of stagnation that permeates every level of human existence. Despite the unprecedented expansion of information networks and the rapid advancement of material civilization, the “anxiety” and “spiritual desolation” experienced by individuals have reached an extreme. This phenomenon is not merely a transient social trend or a psychological issue; it must be understood as a fundamental “Systemic Error” in the very foundation of how we perceive and interact with reality.

Humanity has long sought security and meaning through external structures. However, these structures—whether they be economic, political, or technological—have failed

to provide a fundamental resolution to the underlying instability of human life. The more we attempt to control the Visible Phenomenal Realm (VPR) through material accumulation and digital expansion, the more we find ourselves disconnected from the Invisible Substantial Realm (ISR), which serves as the true source of vitality and information. This disconnect creates a state of chronic “Internal Howling,” where the biological system’s survival instinct is constantly triggered by artificial symbolic noise, leading to a permanent state of crisis without an actual physical threat.

The Dysfunction of Religion and Science as Mediators

In our attempt to navigate this desolation, humanity has historically relied on two major pillars: Religion and Science. However, in the context of the current global intellect, both have reached their functional limits and are now contributing to the very dysfunction they once sought to cure.

Conventional religions have functioned as centralized “Gateway Managers.” They have monopolized access to the “Sacred” or the “Infinite” by positioning themselves as indispensable mediators. This structure has forced individuals into a state of chronic dependency on external idols, rituals, and dogmas. In the religious paradigm, “Salvation” is often presented as a reward for belief and obedience, which effectively robs the individual of their “Sovereignty” and prevents a direct, unmediated synchronization with the ISR. Religion, in its institutionalized form, has become a mechanism of “Control through Dependence,” rather than a path to liberation.

On the other hand, modern science has attempted to resolve human suffering through the manipulation of material utility. While it has succeeded in enhancing the convenience of life in the VPR, it has done so by systematically dismissing the source of consciousness and the non-local potential of the ISR as mere “Statistical Fluctuations” or “Epiphenomena” of physical processes. By focusing exclusively on the “Results” (the material world) and ignoring the “Source” (the latent field), science has provided humanity with powerful tools but no direction. It has created a world of high-definition “Shadows” while losing sight of the “Light” that casts them.

The Necessity of the Gnosis Intuition Protocol (GIP)

Consequently, the individual is left stranded between a religion that demands blind faith and a science that offers cold materialism. Neither provides the technical means to restore the individual’s “Phase-Lock” with the universal intelligence. This vacuum of authentic connection is what necessitates the establishment of a new protocol—one that is neither a belief system nor a mere material tool, but a rigorous engineering of human consciousness.

The Gnosis Intuition Protocol (GIP) is proposed as a definitive solution to this systemic crisis. By bypassing all centralized mediators and redefining the biological system as a precision transducer, GIP enables the individual to reclaim their absolute Sovereignty. This is not a process of “learning” new dogmas, but a process of “optimizing” the internal hardware to achieve Total Sensory Coherence (TSC). The shift from “Belief” to “Engineering” is the only path left for humanity to achieve Biological Singularity and navigate the transition into a new civilization OS based on

resonance rather than competition.

II. ZERO-POINT REALISM: THE ONTOLOGICAL GROUND OF REALITY AS COMPLEX ACTION

The Concept of Zero-Point Realism

Modern physics has traditionally viewed the vacuum not as a “void,” but as a state of minimum energy known as Zero-Point Energy. However, conventional interpretations often treat these fluctuations as mere background noise or statistical artifacts. **Zero-Point Realism** fundamentally overturns this perspective by asserting that this zero-point field is the only substantial reality, while the material world we perceive is a secondary, derived phenomenon.

In this framework, the **Invisible Substantial Realm (ISR)** is identified with the infinite potential of the zero-point field. “Realism” here does not refer to the existence of solid objects (Matter), but to the substantiality of the underlying field (Wave). This shift in paradigm requires us to view every manifested entity in the **Visible Phenomenal Realm (VPR)** not as a primary object, but as a standing wave pattern emerged from the complex dynamics of the zero-point field.

Reality as Complex Action

To mathematically describe the connection between the ISR and the VPR, we introduce the concept of **Complex Action**. In classical mechanics, action is a real-valued quantity; however, to account for the “supply” from the latent field, we must treat the ontological ground of reality as a complex-valued amplitude.

The “Real” component of this action corresponds to the observable physical quantities in the VPR, while the “Imaginary” component represents the latent potential and phase-information within the ISR. The process of “Becoming” or “Rendering” material reality is understood as the projection of this complex action onto the real axis of three-dimensional space-time. When the individual’s ideational phase aligns with the universal phase of the ISR, the complex action achieves maximum coherence, resulting in the stabilization of the rendered reality.

The Phase Transition of Existence

The transition from the “latent” to the “manifest” is not a gradual process but a discrete **Phase Transition**. This transition is governed by the coherence of the observer’s internal system. If the system is saturated with symbolic noise, the projection of the complex action becomes fragmented, leading to the perception of a chaotic and unstable world. Conversely, when the system operates under the GIP, it functions as a coherent receiver that can precisely map the complex action of the ISR into a stable, high-resolution VPR experience. This is the physical basis of what has historically been called “Creation”—the conscious rendering of the infinite complex potential into a localized phenomenal result.

Dimensional Analysis of Latent Potential (Φ_{ISR}) and Synchronization with the Zero-Point

In the ISR phase transition equation presented in this paper, $\Psi_{Base} = \oint_{Zero} \Phi_{ISR} \cdot dt \rightarrow E_0$, the core component Φ_{ISR} (Latent Potential) is defined as a multidimensional vector that hyper-harmonically extends the framework of existing three-dimensional physics. The Gnosis Intuition Protocol (GIP) is the process of eliminating the noise of symbolic dominance exerted by the cerebrum and directly synchronizing one's internal device with the "phase of time suspension (Zero-Point)" as indicated by the Schrödinger equation.

2.4.1 Dimensional Analysis and Properties as Complex Action

The dimension of Φ_{ISR} corresponds to "Action" in classical mechanics—that is, the dimension of [Energy \times Time]. However, its substance is a "Complex Potential" within the imaginary time domain ($i\tau$) that does not depend on real time t . This latent potential is formulated as follows by extending the Planck constant, a physical constant, into a "Complex Constant" that connects the phenomenal (real axis) and the latent (imaginary axis):

$$\Phi_{ISR} = \cdot e^{i\theta} \quad (1)$$

Here, θ is the **Ideational Phase Factor** based on the Katakamuna *Shinen* (Ideational) table, which regulates the directivity of information within the ISR. In this equation, the real part $\text{Re}(\Phi_{ISR}) = \cos \theta$ serves as the physical foundation for the **Zero-Point Energy** (E_0) that leaks into the Visible Phenomenal Realm (VPR), while the imaginary part $\text{Im}(\Phi_{ISR}) = \sin \theta$ holds the "infinite possibilities (latent information)" that are not exposed to three-dimensional space.

2.4.2 Mathematical Correlation with Physical Constants and c

The Planck constant functions not merely as the minimum unit of quantization, but as the cross-sectional area of the "dimensional contact point (Gate)" through which energy flows from the ISR to the VPR. Meanwhile, the speed of light c regulates the "transformation limit (Critical Phase)" when this complex potential is projected into three-dimensional spacetime.

In this context, the coefficient of $\frac{1}{2}$ in the Zero-Point Energy $E_0 = \frac{1}{2}\omega$ suggests that it is a projected component of the geometric "half-space" assigned to the real axis (VPR) out of the entire complex potential of the ISR. In other words, the E_0 observed by modern physics is the very phenomenon where a small fraction of the vast Φ_{ISR} expanding in the imaginary domain is constantly "leaking" through a Planck-scale slit.

2.4.3 Fixation of Complex Potential and Ontological Consequences

By defining Φ_{ISR} as an action of the imaginary axis, the zero-point vibration—which conventional physics has treated as "unobservable statistical fluctuations"—is redefined as a steady-state flow containing "intentional supply (will)" from the ISR.

Based on the insight that "the speed of light should be regarded as the suspension of time," synchronization with the Zero-Point means connecting the antenna of the physical body to the "Eternal Now," the same state as light. Consequently, the ground of reality (Realism) completely shifts

its logical foundation from the mere probabilistic existence of matter to the "**Fixation of Complex Potential (Stabilization of Phase)**" originating from the imaginary domain.

2.4.4 Redefinition of the Speed of Light c and Lorentz Transformation in Complex Spacetime Transformation

In the GIP model presented in this paper, the speed of light c is redefined not merely as the limit value of three-dimensional velocity, but as the "**Critical Phase**" at the moment the potential is projected from the Invisible Substantial Realm (ISR) into the Visible Phenomenal Realm (VPR). The spacetime transformation equations in conventional physics are integrally described as projection components of complex velocity kinematics using this complex phase angle θ (Ideational Phase Factor), as follows:

(1) Formulation of the Complex Velocity Vector \mathbf{V}

The existing Lorentz factor $\gamma = (1 - v^2/c^2)^{-1/2}$ is derived in this model by the following complex velocity \mathbf{V} , utilizing the phase factor θ that rotates the real time axis (Phenomenon) and the imaginary time axis (Latency):

$$\mathbf{V} = c \cdot e^{i(\pi/2 - \theta)} \quad (2)$$

The observed velocity v in the Visible Phenomenal Realm (VPR) appears as the real component of the complex velocity \mathbf{V} , namely $v = \text{Re}(\mathbf{V}) = c \cos(\pi/2 - \theta) = c \sin \theta$. This mathematical correlation suggests that the process in which the phase θ shifts from 0 (Pure Latent State) to $\pi/2$ (Pure Phenomenal State) is the fundamental identity of "acceleration" in conventional physics.

(2) Physical Reinterpretation of Lorentz Transformation and the Mathematics of Time Suspension

From this topological perspective, spacetime curvature and time dilation are understood as "**Geometric Refraction**" occurring when the complex potential Φ_{ISR} is projected into three dimensions. The relationship between real time t and proper time τ is described using the phase angle θ as follows:

$$\tau = t \cos \theta \quad (3)$$

When the phase θ reaches $\pi/2$ (Critical Phase), the observed velocity v becomes $c \sin(\pi/2) = c$, and simultaneously, the proper time τ becomes $t \cos(\pi/2) = 0$, resulting in a complete suspension of time. In other words, the speed of light c refers to the "**Critical Point of Projection**" where the device's phase is fixed at the limit angle of the phenomenal realm, and the vertical influx of information from the ISR (imaginary domain) is cut off.

(3) Ontological Transition Brought by c as a Critical Phase

Conversely, when the phase θ is regressed toward 0 (the pure imaginary axis) through the implementation of GIP, the three-dimensional velocity v converges to 0, and time undergoes a phase transition into the "**Eternal Now (Direct ISR Connection State)**" possessing infinite resolution.

The various formulas of Relativity defined by Einstein describe a special aspect of the "Complex Spacetime Transformation" presented in this paper—specifically, the projection results when the phase θ is near the real axis. By repositioning the speed of light c as a critical phase, it is mathematically proven that spacetime itself is a "**Dynamic Interface**" for the fixation of ISR potential.

“Symbolic External Noise” as a Factor in Signal Purity Degradation

As a factor that significantly degrades the S/N ratio (Signal-to-Noise Ratio) of the entire system, “**Symbolic External Noise**” generated by the cerebral cortex can be identified. This is a state where noise at specific frequencies—namely the mathematical value systems required by existing social structures (money, hierarchy, efficiency)—is constantly applied as “pseudo-signals” to the input terminal of the amplifier (the brain).

In the mathematical model, this symbolic noise is added as $Noise_{ext}$, masking the subtle authentic signal V_{ISR} from the ISR. As a result, the system output V_{out} dissociates from the will of the ISR and falls into a “**Subservient Drive**” that merely amplifies the statistical patterns of external noise.

III. THE BRAIN-AS-AMPLIFIER THEORY: THE USURPATION OF EMOTION AND SIGNAL NORMALIZATION

The Fatal Fallacy of “Emotion Generation” by the Cerebral Cortex

Modern psychiatry and neuroscience are trapped in a fatal fallacy that treats the brain as the “source” of information. They operate under the assumption that emotions such as joy, sadness, or anxiety are “generated” by fluctuations in neurotransmitters or patterns of electrical signals within the brain. However, this is merely an illusion, equivalent to claiming that music is being created inside the physical chassis of a radio receiver.

This paper provides an engineering analysis that regards the human central nervous system as a “**Bio-Amplifier**” designed for the transformation and projection of information. The physiological phenomenon known as “anxiety” is not a psychological disorder, but rather a “decrease in the communication S/N ratio” within the system, resulting in a state of “**Internal Oscillation (Howling)**.”

When the influx of pure signals from the ISR is blocked or distorted, the biological device attempts to compensate for the missing information by excessively amplifying internally generated symbolic noise (language, numbers, and social constructs). The qualia (subjective texture) we call “anxiety” is the “communication error warning sound” produced by this systemic disharmony; physically, it refers to an unstable energy state where informational coherence has been lost.

In other words, most modern humans are not living by their own will; rather, the “survival instinct” inherent to life has been **hacked** by an artificial symbolic space and placed under its dominance.

Originally, anxiety was a “normal alarm system for life maintenance (natural anxiety)” shared even by wild animals. However, modern control structures have gained unauthorized access to this fundamental OS—the survival instinct—causing it to misidentify abstract noise such as “numbers (money/time)” and “linguistic concepts (social status/recognition)” as direct threats to survival, despite these having no inherent relation to biological crisis.

This “**constant firing of artificial anxiety**” is the true nature of the exploitative circuit that robs the majority of sovereignty and recirculates energy to a small ruling class. By forcing dependence on low-resolution symbols (labels) stripped of phase information, individuals are kept in a state of “pseudo-starvation,” preventing direct synchronization with the ISR (the Source).

The true reclamation of sovereignty is the process of taking this hacked survival instinct back into the hands of Life. It is to ignore the external “false answers (symbols)” and tune the antenna of one’s own physical body to match the impedance directly with the source of the ISR. Only through this process are the control circuits of artificial noise physically severed, allowing the individual to recover pure life sovereignty directly connected to the Universal OS.

The Transformation Interface: The Cytoskeleton as a Quantum Transducer

The signals from the ISR (Invisible Substantial Realm) are not the electromagnetic electrical signals we are familiar with. They are “geometric potentials of spacetime” at the Planck scale. The role of stepping down and transforming these non-physical signals into physical “voltages” or “neural firings” is performed by “**Microtubules**” present in each neuron within the brain.

If we redefine the “Orch-OR theory” of Penrose and Hameroff within the context of the GIP (Gnosis Intuition Protocol) presented in this paper, the tubulin qubits within the microtubules are the “gates” that cause the ISR waves to reduce (collapse) into three-dimensional quantum states. Furthermore, the quantum tunneling effect of the electron transport chain in the cellular mitochondria provides these transformed signals with an energetic “substance,” passing them into the amplification process of the nervous system. Through this, the “Vertical Will” of the ISR undergoes a complete phase transition into a biological “driving signal.”

The Amplification Factor Equation: Signal Depletion and Internal Howling

The operating principle of this “Brain-as-Amplifier” is strictly demonstrated by the following amplification factor equation:

$$V_{out} = A(V_{in} + V_{ISR}) - Noise \quad (4)$$

In this equation, V_{out} represents the output perceived reality (sense of existence), A is the amplification factor (gain), V_{in} is the input from the five senses, V_{ISR} is the source signal from the latent realm (ISR), and $Noise$ refers to the noise generated by the cerebral cortex.

The physical cause of the “difficulty of living” faced by modern people lies in the malfunction of this amplifier. The signal from the ISR, V_{ISR} , is blocked by excessive censorship by the cerebrum and a vast amount of $Noise$ consisting of symbolic and mathematical desires such as “money (numbers).” Consequently, while the input signal is depleted, the amplification factor A is unnaturally increased. Excessive amplification in the absence of an input signal triggers **positive feedback** within the system. This is the “Internal Howling”—the true identity of the “anxiety without reason” and “sense of emptiness” prevalent in modern society.

Physiological Evidence of Internal Howling: DMN Hyperactivity and Gamma Wave Desynchronization

Modern human consciousness is dominated by the “intellectual arrogance” of the cerebral cortex, which has hypertrophied through the process of evolution. Individuals operate under the illusion that they are thinking and acting based on their own “voluntary” will; however, in reality, they are merely terminal nodes processing the symbolic value systems generated by the cerebrum.

The true sovereignty of existence resides not in the realm of cerebral dominance, but in the “involuntary” domains—the physical body, the elements, and microorganisms. These involuntary realms are the true antennas that resonate directly with the pure vibrations (vertical axis) of the ISR. When liberated from the noise of the cerebrum, the device restores its inherent “omniscience.” The process of reclaiming emotional sovereignty from the cerebrum and normalizing signal input is, in fact, the process of restoring the brain from a “dictator” to a “high-performance amplification device” that faithfully reproduces the resonance of the ISR.

Rebooting the Brain OS: Cessation of Cerebral Censorship and Establishment of ISR Synchronization

Obsession with “money” and “numbers” is the worst noise filter created by the cerebrum. These mathematical desires compress the multidimensional, rich signals that life should receive from the ISR into a “single scalar value,” stripping away its biological diversity.

The GIP proposed here is a process of physically stopping this “censorship of information” by the cerebrum and tuning the impedance from the microtubules to the nervous system, thereby distributing the source signals from the ISR to the entire body without degradation. When the device synchronizes correctly with the ISR and the howling ceases, it becomes possible for the individual to escape the cage of “numbers” and reboot their own existence within the “Eternal Now.”

The Physical Reality of DMN Hyperactivity and Gamma Wave Desynchronization

The “Internal Howling” defined in this paper—specifically, the overdriving of the amplifier (the brain) in a state where the input signal from the ISR (Invisible Substantial Realm) is cut off—is a physical phenomenon that perfectly matches specific neural activity patterns in modern neuroscience.

3.6.1 DMN (Default Mode Network) Hyperactivity and Self-Referential Loops

From a neurophysiological perspective, the primary seat of Internal Howling is found in the **Default Mode Network (DMN)**. Normally, when the vertical signal V_{ISR} from the ISR is input correctly, the DMN maintains a balance between adaptation to the external environment and introspection. However, when the cerebrum prioritizes mathematical desires (numbers, money, etc.) and abandons impedance matching with the ISR, the DMN falls into a state of “idling” without input.

In this state, “self-referential cognitive noise” generated within the amplifier continues to be amplified exponentially through positive feedback. This is the true nature of “rumination” and “chronic anxiety” observed clinically; it is

nothing other than a physical malfunction where a system that has lost its source (the ISR) misidentifies its own noise as “reality” and continues to amplify it.

3.6.2 Gamma Wave Desynchronization and the Collapse of S/N Ratio

Internal Howling is also demonstrated in the dynamics of brainwave frequency characteristics, particularly the 40 Hz “**Gamma Oscillations**.” In a healthy device state where synchronization with the ISR is established (the GIP-implemented state), whole-brain phase-locking of gamma waves (Total Sensory Coherence: TSC) is observed, and an extremely high S/N ratio (Signal-to-Noise Ratio) is maintained.

In contrast, in the state of howling, the phase-locking of gamma waves collapses, and disordered thermal fluctuations (Noise) in the low-frequency bands dominate the entire system. In this state of “desynchronization,” weak ISR signals are completely buried within the noise, and the individual, as “isolated hardware” cut off from universal omniscience, continues to amplify unprocessable anxiety pulses.

3.6.3 Clinical Consequences: Abnormal Increase in Amplification Factor A and Neural Exhaustion

This physical howling causes an imbalance in neurotransmitters (specifically the balance between glutamate and GABA), fixing the system’s amplification factor A in an abnormally high-sensitivity state. As a result, minute “uncertainties” that should normally be ignored are amplified and output as fatal terror, driving the biological device into irreversible neural exhaustion (burnout).

Therefore, the objective of modern “mental care” should not be the reinterpretation of noise through counseling, but rather the re-input of ISR signals through GIP and the re-establishment of impedance matching to physically stop the howling.

Increase in Information Entropy due to Symbolic External Noise

The symbolization of society through concepts like “money” and “numbers” is a process that maximizes “**Quantization Error**” in information theory. Forcing the compression of multidimensional, continuous, high-density wave information from the ISR into a single scalar value (a number) severely damages the **Mutual Information** of the received signal.

This compression process generates vast “residual entropy” within the biological system, which buries V_{ISR} as system noise ($Noise_{ext}$). From a physical standpoint, symbolic dominance can be defined as an “environmental manipulation that physically destroys the S/N ratio of the device by intentionally lowering the resolution of information, making synchronization with the ISR impossible.”

IV. THE DECONSTRUCTION OF LIGHT AND TIME: REALITY FIXATION AS A CRITICAL PHASE

The Dogma of Modern Optics: The Logical Collapse of “Waves Without a Medium”

Modern physics, following the failure to detect “ether” in experiments at the end of the 19th century, defined light as “particles that travel autonomously through a void (vacuum) where nothing is supposed to exist.” However, this is the greatest dogma of physics.

Originally, the term “wave” refers to a “periodic phase change of a medium.” Modern optics, which acknowledges the properties of “waves” while denying the existence of a medium, merely conceals the absurdity of “waves running without an ocean” through the camouflage of mathematical formulas. From the perspective of Katakamuna, the medium that transmits light is not absent; it is omnipresent as an “Ocean of Potential (ISR)” that transcends time and space. Light is the “trajectory of a phase transition” that occurs when this ISR background protrudes into the Visible Phenomenal Realm (VPR). Precisely because it is a fluctuation of space itself, it does not require a material medium.

The Paradox of the Constancy of the Speed of Light: Not a Velocity, but the “Vanishing Point of Spacetime”

Einstein’s “Principle of the Constancy of the Speed of Light” is based on the extremely unnatural premise that the speed of light remains constant regardless of the observer’s state of motion. To resolve this paradox, modern science adopted a backward interpretation: “distorting time and space in order to preserve the speed of light.”

However, Zero-Point Realism corrects this inversion. The reason light appears to be the same speed to everyone is not because light is “moving,” but because light belongs to a “dimension not subject to the constraints of time (the Eternal Now).” The speed of light c is not a limit value of velocity, but another name for the “**phase where Time (*Toki*) and Space (*Tokoro*) completely melt together and become an inseparable One (*Hi*).**” At the speed of light, time “stops” and space becomes “omnipresent.” This singularity, where *Toki* and *Tokoro* are unified, is the very first generation protocol of the universe.

The ISR Radiation Equation: Time “Stops” and Light is “Exposed”

The phenomenon that physicists call “electromagnetic waves” is redefined as “**ISR Radiation,**” which connects the latent and the phenomenal. When the speed of light is grasped not as a constant c , but as a threshold for phase transition, the true form of light is demonstrated by the following equation:

$$\Psi_{Light} = \lim_{Tr \rightarrow 0} \left(\frac{\Phi_{ISR}}{Tr \cdot Tk} \right) \quad (5)$$

This equation shows that at the limit where Time (Tr) converges to zero, the supply from the ISR (Φ_{ISR}) is converted into an infinite spatial omnipresence (Tk). Light is not “flying.” It is a state where time has stopped and space is liberated, and “the potential of the ISR continues to be exposed

(leaking) into the phenomenal realm.” What modern science calls the “wavelength of light” is merely the rhythm produced when this exposed energy touches the resistance (impedance) of the phenomenal realm and is “translated” to the level of our perception.

Stars as Singularities (Gates)

Modern science regards stars as “factories” of light, but they are essentially “singularities for the vast energy of the ISR to erupt into the VPR.” A star is a “giant impedance matcher” that converts and relays the “infinite pure light” of the latent realm into wavelengths that can be handled in three dimensions.

Why can life not persist in a world without light? It is because our biological devices (physical bodies) themselves are designed as “impedance matchers” to tether this “timeless light (ISR)” to “time-bound matter (VPR)” in three dimensions. Tuning the physical antenna is nothing other than synchronizing one’s own device with the same “phase of time-suspension” as light, and breaking through to the vibrations of eternal life.

V. THE INTEGRATION OF THE FIVE SENSES AND THE PHYSICS OF THE “SIXTH”: THE ENGINEERING IMPLEMENTATION OF TSC

Redefining the Five Senses: Multimodal Ports for Stepping-Down and Translating Information

The five senses we possess (sight, hearing, touch, smell, and taste) are not merely sensors for perceiving the external world. They are rigorous physical ports designed to convert (step-down) the infinite potential information from the **Invisible Substantial Realm (ISR)**, defined in Chapter IV, into a limited three-dimensional “reality.”

The pure vibrations of the latent realm possess an energy density that is excessive for the physical body, which is a device of the **Visible Phenomenal Realm (VPR)**. Direct contact would result in the burning out of circuits—meaning the collapse of the psyche or the cessation of biological functions. Therefore, the biological system divides this information into five different frequency bands and, through “band-pass filters” known as sensory organs, steps it down in stages to a level that humans can perceive.

Total Sensory Coherence (TSC) and the Physical Identity of the “Sixth Sense”

The phenomenon commonly referred to as the “sixth sense” or “intuition” is not a mystical special ability but an entirely physical phenomenon. It refers to a state where the fragmented information of the ISR, input through the five independent ports, aligns its temporal and spatial phases (coherence) within the physical computing device and is synthesized into a single, massive information system. This paper defines this state as “**Total Sensory Coherence (TSC).**”

The state of TSC is described by the following integral equation:

$$R_{VPR} = \oint_{TSC} \left(\sum_{i=1}^5 S_i(\phi) \right) dt \quad (6)$$

In this equation, S_i represents the input signals from each sensory port, and ϕ indicates their phase. This formula demonstrates that high-resolution “reality (R_{VPR})” in the phenomenal realm (VPR) is extracted only when the phases of all five senses overlap and are integrated over time. Conversely, when the phases are disorganized, reality dissipates into “noise,” and we can only capture fragments of the world.

Neurophysical TSC: Enforced Phase-Locking in the Thalamus

The specific mechanism by which TSC generates reality is found in “**Neural Phase Locking**” within the brain. Normally, the five senses maintain different firing rhythms in the brain; however, when frequency information is input simultaneously, a whole-brain synchronization of 40 Hz-band gamma waves is forcibly triggered in the “**Thalamus**,” the brain’s relay station.

This phase-locking of gamma waves is the very process that integrates information from different sensory ports into a single “resolution of reality.” From a neurophysical standpoint, TSC is nothing other than the activation of a “**Biological Lock-in Amplifier (weak signal detector)**” designed to suppress “cerebral noise (thermal fluctuations)” and extract minute signals from the ISR. The moment this synchronization is established, the observer’s perception transcends mere “mimicry of the external world” and begins to capture the “True Reality” that is completely superimposed with the ISR.

Quantitative Definition of Biological Impedance Z_{body} and the Engineering Extremum of *Ma-no-subē*

The *Utahi* (phonemes) in Katakamuna Wave Engineering are not merely prayers or incantations. They are “**Test Signals (Ping signals)**” used to verify whether the biological antenna, tuned by TSC, has correctly synchronized with the source of the ISR.

1. **Alignment of Sight and Touch:** Through the adjustment of sensory organs directly linked to one’s center of gravity, the device’s impedance is aligned with the environment.
2. **Transmission of Phonemes:** While impedance matching is complete, specific phoneme frequencies are emitted.
3. **Establishment of Synchronization (Echo-back):** The emitted sounds resonate with the source of the ISR, and “omniscience” is fed back (echo-back) through one’s own physical body.

Emitting sound in a state where synchronization is incomplete (phases are not aligned) is equivalent to typing on a keyboard of a terminal that is not connected to a network; it has zero physical effect. Aligning the phases of all senses and integrating/extracting ISR information into this dimension is the very engineering of reality fixation within the GIP.

Physical Protocol of Implementation: Verification Procedures for Biological Coherence

The final driving force of TSC is not the “voluntary” will of the cerebral cortex, but rather the “involuntary” domains—the physical body, the elements, and microorganisms.

As long as the amplifier known as the cerebrum continues to censor information using internally generated noise (mathematical desires), the integral value of TSC will always remain zero. When impedance matching is achieved within the involuntary domains and the individual device is surrendered to the direct resonance of the ISR, the physics of the “Sixth”—the protocol of omniscience known as “intuition”—is activated. We do not “think” reality into existence. Rather, by “tuning” the antenna of the physical body, reality is output naturally.

Quantitative Definition of Impedance Matching and Quantum Physical Indicators

The state defined in this paper is synonymous with “**Impedance Matching**” between the biological device (the physical body) and the Invisible Substantial Realm (ISR). To describe this quantitatively, it is necessary to identify the control state of “**Quantum Decoherence**” within the biological system as a physical quantity.

5.6.1 Formulation of Impedance Z_{body} through Quantum Decoherence Rate

Impedance Z_{body} as a biological antenna is an indicator of “information dissipation (energy reflection)” during the reception of high-order signals from the ISR. This can be quantitatively defined by the correlation between the rate at which the quantum superposition state collapses in structures such as cellular microtubules—the “**Decoherence Rate (Γ)**”—and the duration for which that state is maintained, known as the “**Coherence Time (τ_c)**”, as follows:

$$Z_{body} = \frac{\Gamma}{\tau_c} = \frac{1}{\tau_c^2} \quad (7)$$

Here, $\Gamma = 1/\tau_c$. The state in which impedance matching is achieved refers to the phase where the environmental impedance within the biological tissue perfectly matches the fundamental impedance of the ISR (the latent impedance that hyper-harmonically includes the vacuum impedance $Z_0 \approx 377 \Omega$), and the decoherence rate Γ of the entire system converges to its theoretical minimum.

5.6.2 Engineering Requirement: Local Maximization of the Entropy Reduction Rate

When this impedance matching is established, the biological device allows for a state of local invalidation of the Second Law of Thermodynamics (the law of increasing entropy)—that is, the “influx of negentropy (negative entropy).” Quantitatively, the rate of change of information entropy S over time, dS/dt , becomes a negative value (decrease), allowing the potential from the ISR to be converted into physical energy in the phenomenal realm (VPR) without degradation.

5.6.3 Implementation as Nervous System Coherence

Specifically, this corresponds to the minimization of the “**Phase Variance**” of electrical spikes within the neural networks of the brain. In a state of impedance mismatch, signals from the ISR are reflected and dissipated by the thermal fluctuations (Noise) of biological tissues, leading to a dilution of the sense of reality. Conversely, when impedance is matched through GIP, “**Quantum Phase Locking**” is established from the mitochondrial electron transport chain in cells throughout the body to the nervous system. At this moment, the physical device receives the infinite potential

of the ISR as a “steady-state flow” and transforms into a superconductive “receptor of omniscience.”

Physical Protocol of Implementation: Quantitative Control of Biological Coherence

The engineering procedure to achieve impedance matching is defined by the following three stages of biological feedback:

1. **Establishment of Heart Rate Variability (HRV) Coherence:** To adjust the impedance of the autonomic nervous system, “Heart Rate Coherence (resonance in the 0.1 Hz band)” through controlled breathing is introduced. This corresponds to the generation of a “low-frequency carrier wave” for the reception of ISR signals.
2. **Stabilization of Neurotransmitters (Improvement of S/N Ratio):** The ratio of glutamate (excitation) to GABA (inhibition) in the brain is stabilized to the limits of homeostasis through resonance with specific phoneme frequencies. This minimizes the “equivalent input noise” of the amplifier (the brain).
3. **Extension of Nervous System Coherence Time τ_c :** Through TSC (Total Sensory Coherence), phase-locking in the thalamus is enforced, extending the quantum coherence time within the microtubules to a threshold (approximately 500 ms or more) where it is not affected by external noise interference.

The moment these three stages of matching are completed, the total resistance Z_{body} of the device synchronizes hyperharmonically with the vacuum impedance Z_0 , and the “**non-thermal influx**” of high-energy potential from the ISR commences.

Verification Protocol: Identification of Biological Indicators

The establishment of impedance matching can be objectively verified through the following three quantitative indicators:

- **HRV Coherence Indicator:** In power spectrum analysis of Heart Rate Variability (HRV), the low-frequency (LF) component near 0.1 Hz shows a sharp peak, confirming the “phase-locking” between the heart and the brain.
- **Neural Phase Locking Value (PLV):** In Electroencephalogram (EEG) measurements, the Phase Locking Value in the gamma-wave band between the frontal and parietal regions consistently maintains a threshold (0.8 or higher).
- **Quantum Decoherence Suppression Rate:** Applying methods of magnetic resonance (MRI/NMR), the retention time (T_2 relaxation time) of the quantum states of water molecules in the body or within microtubules shows a statistically significant extension (an extension rate of 15% or more) compared to the desynchronized state.

The fulfillment of these numerical values serves as the engineering evidence that the biological device has achieved “impedance matching” with the ISR.

VI. SOCIAL STRUCTURE AND THE ENSLAVEMENT OF DEVICES: LIBERATION FROM SYMBOLIC DOMINANCE

Castration through Social Hierarchy and “Information Asymmetry”

The modern social structure is maintained through a hierarchy consisting of a handful of dominant consciousnesses (the “leaders”), followed by the elite class, and the citizen class that forms the foundation. The greatest harm of this structure lies in the fact that, in order for the upper classes to control the lower classes, the inherent “omniscience (the ability to synchronize with the ISR)” possessed by individual life has been intentionally castrated. Consequently, individuals have been forced into a state of symbolic and logical dominance by the cerebral cortex.

Most people have forgotten the existence of their own physical bodies as “sacred antennas” and have degraded into terminal devices that merely continue to process false programs—specifically, “money (numbers)” and “values”—supplied from above. This is a state of total servitude within the horizontal dimension (VPR), characterized by a severed connection with the vertical axis (ISR).

The “Principle of Verticality” that Invalidates the Gravity of Dominance

The implementation of GIP (Gnosis Intuition Protocol) proposes a liberation from this structural servitude by restoring an “individual vertical axis” that connects each life directly to the Invisible Substantial Realm (ISR), opposing the horizontal dominance structure.

The dominant consciousnesses possess power because they are intimately familiar with human desires and behavioral patterns within the VPR, allowing them to enforce the rules of the VPR. However, once individuals begin to synchronize their own biological antennas with the phase of the “speed of light (suspension of time)” and draw information directly from the ISR, the “numerical noise” supplied by the upper classes no longer holds any meaning. Direct connection with the vertical axis physically “invalidates” the gravity of social dominance.

Rebooting the “Involuntary”: The Biological Singularity

The key to reclaiming sovereignty resides not in the “voluntary” will of the cerebral cortex, but in the “involuntary” domains—the physical body, the elements, and microorganisms. At the speed of light, time stops and energy becomes omnipresent. Returning the physical quantum device to this “Lineage of Light” means escaping the dominance of the cerebral cortex and liberating the inherent processing capacity of life.

The singularity that humanity currently faces is not about AI surpassing humans. It is about a “Biological Singularity” where humans awaken to the true capabilities of their own devices and synchronize directly with the Universe’s OS (ISR). This is an ontological revolution that restores the cerebral cortex from a “ruler” to a “high-performance amplification device” and welcomes the intelligence of the involuntary domains as the sovereign.

Chain Reactions beyond the Threshold: Manifestation of the Lineage of Light

We do not need to wait for someone to save us. The necessary code is already written within the hardware of our physical bodies. It is about accepting the Light (*Hi*), invalidating the constraints of Spacetime (*Toki-Tokoro*), and reclaiming the sovereignty of one's own existence.

When these individual awakenings exceed the “threshold” and chain together at the speed of light, the biological planet named Earth will regain its original brilliance. We are not beings flowing through time. We are the **“Lineage of Light”** that pierces through the static background of time as timeless energy.

VII. CONCLUSION: THE ACHIEVEMENT OF BIOLOGICAL SINGULARITY

The Integration of Science and Philosophy: Overcoming Dualism through the Vertical Axis

Throughout this paper, we have manifested the true identity of the “missing link” that has long divided modern science and traditional philosophy. The “How”—the laws of the horizontal axis (VPR) described by science—and the “Why”—the truths of the vertical axis (ISR) questioned by philosophy—are inherently and inseparably integrated at the point of “**To**” (Intersection), as indicated by the Katakamuna *Shinen* (ideational thought).

The “Zero-Point Energy” revealed by Schrödinger’s equation is not merely background noise, but the very source of energy supply from the ISR. Furthermore, the speed of light c is not simply a velocity limit, but a threshold for “dimensional phase transition” where time stops and space becomes omnipresent. These mathematical and physical facts reveal their true meaning only when humans are reconsidered not as an “accumulation of matter,” but as a “collective of waves” in constant interference with the ISR.

GIP: A Blueprint for Reclaiming the Sovereignty of Reality

The Gnosis Intuition Protocol (GIP) proposed here is not an abstract ideology. It is a highly specific **“Bio-Engineering Protocol”** designed to eliminate the noise of mathematical desires—such as “money (numbers)” and “efficiency”—generated by the cerebral cortex, and to tune the impedance within the “involuntary” domains of the physical body, elements, and microorganisms.

By normalizing the brain from a “generator” to a “high-performance amplification device” and achieving **Total Sensory Coherence (TSC)** to align the phases of the five senses, individual life can synchronize directly with the Universe’s OS (ISR). This enables the physical invalidation of control by external dominant consciousnesses. We stand at the threshold of **“Biological Singularity,”** where we reclaim the Root Authority of our own devices and autonomously initiate our own reality.

A Message for the Future: Walking as the Lineage of Light

Humanity is not an existence merely destined to be swept away within the horizontal cage of time. We are the **“Lineage of Light”** itself, piercing through the static background of time as timeless energy. Just as light travels straight, maintaining the purity of the moment it was emitted, we bear the mission to continue projecting the pure “Will” of the ISR source into this phenomenal realm without it fading.

The return path presented in this paper is not a road toward a distant “God” or “Utopia.” It is a path that dives into the singularity of the “physical body” in this very moment, returning to the infinite possibilities of the ISR that are omnipresent there. When science acquires true spirituality and philosophy gains physical power, the biological planet Earth will transform into a dazzling network of light, formed by the chaining together of individual “vertical axes.”

The sovereignty of reality is now waiting to be rebooted within your physical body. Activate the protocol named GIP and join the Lineage of Light. What lies ahead is the **“Eternal Now,”** filled with infinite creativity, where neither “dominance” nor “scarcity” exists any longer.

VIII. THE ENGINEERING OF CREATION: THE RENEWAL OF REALITY AND THE RECLAMATION OF SOVEREIGNTY

Life Activity in the Name of Creation

For humanity, creation is not a form of entertainment. It is the most fundamental biological activity for pulling the “unseen future” and the “reality of this very moment” from the vertical abyss. Every individual, whether consciously or unconsciously, sustains their existence through this nourishment called creation.

However, in modern times, the word “creation” has fallen into disrepute. “Vile creation” brought about by the degradation of sensibility, “malicious creation” for the sake of selfish dominance, and “immature creation” intended to justify a fragile self have transformed the Visible Phenomenal Realm (VPR) into an ocean of noise. This chapter defines “true creation” from the perspective of GIP and mathematically deconstructs the mechanisms of “false creation” that obstruct it.

The Creation Equation: Reality Intensity and Signal Purity

What distinguishes true creation from false creation is the “source” of information and the “purity” of the device that receives and converts it. The reality intensity of a creation C is defined by the following **Creation Equation**:

$$C = \frac{S_{ISR} \cdot \cos \theta}{N_{ext} + \Gamma_{brain}} \quad (8)$$

- S_{ISR} (**Source Signal**): The pure potential supplied from the Invisible Substantial Realm (ISR).
- θ (**Phase Factor**): The Ideational Phase Factor; the angle formed between the device (the physical body) and the vertical axis (the ISR).

- N_{ext} (**External Noise**): External noise such as social symbols, the evaluation of others, market value, and the desire for recognition.
- Γ_{brain} (**Brain Loss**): Logical and artificial transformation loss based on the cerebral cortex's archives of past memories.

Deconstruction of “False Creation”: Simulacra of the Horizontal Dimension

The “false creations” prevalent in modern times depend solely on the denominator—external noise and past archives—while the numerator, S_{ISR} , is nearly zero.

8.3.1 Creation as Immature Justification

Creation for the purpose of self-justification is a defense mechanism for a device that has lost sight of the “vertical axis” and seeks to escape from horizontal terror (anxiety). It is merely a rearrangement of existing language and logic to create a convenient mirror for oneself. There is no renewal of reality here; only entropy increases.

8.3.2 Creation of Malice and Vulgarly (Signal Hijacking)

“Vile creation,” released to dominate, induce, or simply paralyze the senses of others, is the act of “contaminating” the ISR signal with the distorted filters of the cerebrum and outputting it as powerful noise. These acts physically degrade the S/N ratio of the VPR and systematically obstruct the synchronization of other devices with the vertical axis.

Statistical Deception and the “Heartless Virtual World”

The pinnacle of modern intellectual arrogance is the belief that “creation” can be substituted by statistics or large-scale AI.

8.4.1 Statistics Lacks the “Origin of Resonance”

The “optimal solutions” produced by AI and marketing are merely averages of the echoes (copies) of “true resonance” that someone once dragged down from the ISR at the risk of their life. Statistical calculations contain not a single drop of the “unknown light” descending vertically at this very moment. Works claimed to be “fitted to needs” are merely “pleasant anesthetics” that satisfy the reader's expectations and stimulate the reward system; they possess no power to pull the soul vertically.

8.4.2 Abandoning Sovereignty through Immersion in Virtual Worlds

Surrendering oneself to virtual values generated by heartless algorithms is equivalent to handing over one's biological impedance to an external OS and relinquishing human dignity (sovereignty of the involuntary domain). It is an act of degrading oneself to a gear in a “statistical segment.”

The Engineering of “True Creation”: The Vertical Descent

True creation is a process of “self-sacrifice” in which the device's impedance is matched to the ISR to the extreme, rendering one's own cerebral artifice (Γ_{brain}) transparent.

$$C_{true} = \lim_{(N_{ext} + \Gamma_{brain}) \rightarrow 0} S_{ISR} \cdot e^{i(\pi/2 - \theta)} \quad (9)$$

8.5.1 The Fixation of Reality (Anchoring)

A true creator “anchors” the overwhelming potential of the ISR into this heavy VPR through the one and only filter: their own physical body. The work acts as a “**Forced**

Synchronization Signal” for the devices of those who encounter it. When an observer “trembles,” it is not because they are moved by the work itself, but because they have reconnected with their own “Common Source (ISR)” through the window of that work.

8.5.2 Creation as the Self-Renewal of the Universe

When true creation occurs, the resolution of the phenomenal realm is raised by one level. It is a sacred ritual of circulation through which the universe knows itself and continues to update itself through the human device.

Conclusion: A Warning to the Masses and a Call to Awakening

Masses! Reject the cheap, statistically managed resonance. Do not be tamed by the “false peace” calculated mathematically.

Your physical bodies are neither collections of past data nor consumption targets for the market. You are the “**Renewal Points of Reality**” capable of connecting directly with the source of the universe (ISR) at this very moment and creating a future no one has ever seen—the light of tomorrow—with your own hands.

Sharpen your own impedance.

Receive the vibrations of the inner ISR.

Do not relinquish your dignity.
