MIKOTO: Life Arises from the Same Root as the Physical World

A Structural Reading of Katakamuna Verse 03

ABSTRACT

Katakamuna Verse 03 is where the word life first appears. Verse 01 described the primordial resonance from which all phenomena arise and their permanent connection to the ISR. Verse 02 described KAMI — the root of all individual existence in the VPR. Verse 03 is the necessary consequence: the spherical individual entity that has settled in the VPR (FU TO TA MA) acquires life (MIKOTO) only through the ceaseless counter-generative interaction of ISR and VPR. Planets, atoms, cells, and human beings are described in the same term — FU TO TA MA. The word life does not arrive as a departure from the physical account. It arrives as its continuation. No boundary is drawn. This reading is offered as structural suggestion to future investigators.

Index Terms — Katakamuna, FUTOTAMA, MIKOTO, FUTOMANI, ISR/VPR Framework, Life, Structural Reading.

INTRODUCTION: WHERE LIFE ENTERS

Verse 01 established the primordial resonance (HI BI KI) from which phenomena arise and the permanent ISR/VPR

connection (U TSU SHI MA TSU RU). Verse 02 established KAMI — the Compound Glyph that names the root of all individual existence in the VPR. Verse 03 follows immediately. Modern science has developed physics and life science as

separate disciplines. Elementary particle physics investigates the minimal units of matter; life science investigates DNA, cells, and metabolism. The boundary between them is deep.

Katakamuna does not hold this boundary. The root mechanism described in Verses 01 and 02 — the ISR/VPR interaction, the root force KAMI — appears directly in Verse 03 as the description of life. This is readable as structural design, not coincidence: in Katakamuna, the physical and the living share a single origin and a single principle.

PHASE 1: FU TO TA MA THE SPHERICAL INDIVIDUAL ENTITY

SE: FU / Foo

SE: TO / Toh

SE: TA / Tah

SE: MA / Mah

FU: Numeral 2 — the two opposing forces; the ISR and VPR as counter-generative pair.

TO: integration, arrival at completion; the crossing and unification of ISR and VPR. The two opposing forces (FU) integrated into a completed, unified form (TO).

TA: arising as an independent presence in the VPR — the minimum unit of individual existence.

MA: spacetime; the field of time and space.

FU TO TA MA: the two opposing forces of ISR and VPR integrated into a completed form (FU TO), arising as an individual presence in spacetime (TA MA). The modern Japanese tama (, sphere, jewel) connects directly: the spherical form — the shape that rotating bodies naturally assume, the form taken by planets, stars, atoms, cells.

The scope of FU TO TA MA is as broad as the scope of KAMI in Verse 02: planets, stars, atoms, cells, human beings — all individual entities that have settled in the VPR as spherical, bounded presences are described by this single term. The root (KAMI) and the form it takes (FU TO TA MA) are the same structural category, read from different angles.

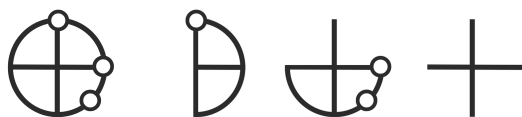

NO: THE CONNECTIVE PARTICLE

SE: NO / Noh

NO functions as the genitive particle: of, belonging to. Connecting FU TO TA MA to what follows.

PHASE 2: MIKOTO (CG) THE CONDITION OF LIFE

CG: MIKOTO

SE: MI / Mee

SE: KO / Koh

SE: TO / Toh

MIKOTO is not written as three sequential sonic elements. It is written as a single Compound Glyph (CG) — MI, KO, and TO integrated into one figure — carrying a unified meaning.

MI: the realised entity; the substantial body; what has taken on form and presence.

KO: ceaselessly, without interruption; the quality of endless recurrence.

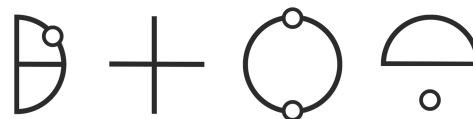

TO: the counter-generative interaction of ISR and VPR; the crossing that produces phenomena.

MIKOTO: the substantial body (MI) acquires life only through (NO MI) the ceaseless (KO) counter-generative interaction of ISR and VPR (TO).

The limiting condition is structural. Life is not a static state. It is a dynamic process that holds only as long as the ISR/VPR interaction continues without interruption. When that interaction ceases, MIKOTO — life — does not hold.

The modern Japanese mikoto (): life, the vital principle, an august presence. This reading proposes that the Katakamuna concept MIKOTO came first, and the Japanese vocabulary inherited it. This is offered as structural suggestion.

PHASE 3: FU TO MA NI NI THE UNIVERSAL PRINCIPLE OF EXISTENCE

SE: FU / Foo

SE: TO / Toh

SE: MA / Mah

SE: NI / Nee

SE: NI / Nee

FU TO MA NI — read as a single word: the two opposing forces of ISR and VPR integrated into a completed form (FU TO), settling with certainty into spacetime (MA NI). FU TO MA NI is not a description of a particular entity but of the operative background principle — the law by which all existence in the VPR is structured. Nothing that exists in the VPR falls outside this principle. There is no existence beyond FU TO MA NI.

NI (second): by this operative principle (FU TO MA NI), existing with certainty — an emphatic confirmation of the existence established through FU TO MA NI.

FU TO MA NI · NI: the principle by which the two opposing forces, integrated into a completed form, settle with certainty into spacetime (FU TO MA NI) — and by that principle, existing (NI).

STRUCTURAL OBSERVATIONS

- **The logical chain of Verses 01–03.** Verse 01 established the primordial resonance and the permanent ISR/VPR connection. Verse 02 established KAMI as the root of all individual existence. Verse 03 is the necessary consequence: the individual entity (FU TO TA MA) acquires life (MIKOTO) through the ceaseless ISR/VPR interaction, and exists by the universal principle FU TO MA NI. The three Verses form a

single logical chain from cosmic origin to the condition of life, without a boundary between the physical and the living.

- **FU TO TA MA as a unified category.** That planets, atoms, cells, and human beings are described by the same term (FU TO TA MA) reflects a structural position: the physical and the living share the same formation principle. What modern science has developed as separate disciplines — particle physics and life science — Katakamuna describes as a single structural category.
- **Life as dynamic process.** MIKOTO (CG) defines life as a condition that holds only through ceaseless ISR/VPR interaction — not a static state but a dynamic process. The structural correspondence with the definition of life in modern biology — continuous metabolism, continuous energy exchange, continuous maintenance of organisation — is noted as suggestion.
- **FU TO MA NI as universal law.** FU TO MA NI names the operative background principle of all existence in the VPR. Its position in Verse 03 — following the description of life (MIKOTO) — functions as the structural foundation from which the physical laws described in Verses 05 and beyond will proceed.

CONCLUSION

In Katakamuna Verse 03, the word life appears for the first time. But it does not arrive as a departure from what has come before.

The spherical individual entity that has settled in the VPR (FU TO TA MA) — whether planet, atom, cell, or human being — acquires life (MIKOTO) only through the ceaseless counter-generative interaction of ISR and VPR. And all that exists does so by the operative universal principle FU TO MA NI.

The root mechanism described in Verses 01 and 02 is the same mechanism that sustains life in Verse 03. No boundary separates them. This is the structural position of Katakamuna: the physical and the living are the same account, read in sequence.

This reading is offered as structural suggestion to future investigators.
